Core Personality Insights

Introduction

Overview of the 16pf

The 16pf Questionnaire is a comprehensive measure of adult personality. Its results can be applied to many situations because it provides a full picture of the individual by measuring personality both broadly and deeply. This unique level of insight is supported by more than 60 years of research and application.

Overview of the 16pf Profile Report

The 16pf Profile Report provides practitioners with the fundamental elements of a respondent's 16pf information for independent interpretation. Along with the practitioner's judgement, the Profile Report provides comprehensive information about an individual's whole personality, to help you feel confident that you are recruiting the right person for the job.

Use of the Report

Because the statements in this report are automated, they should be viewed as hypotheses to validate against other sources of data (e.g., interviews, work samples, simulation exercises, biographical data or references).

Treat the information in this report as confidential. It should only be shared with organizational members who have a need to know about it. It should be stored in a separate, secure file.

Keep these points in mind when using this report:

- ▶ The results reflect the respondent's description of their own personality and behavior. They may not completely match the way other people see the individual. The accuracy of the results depends both on the respondent's openness in answering the questionnaire and upon their level of self-awareness.
- Often, the value of personality assessment is in comparing a respondent to a larger population. These results describe how the person's profile corresponds to other people who have completed the questionnaire.
- The report describes the respondent's likely style. It does not directly measure foundational skills or knowledge. As a result, the statements should be compared to other information about the individual.

The results of the questionnaire are generally valid for 12–18 months after completion. They may be less useful if an individual undergoes major changes in their work or life circumstances.

Interpreting Midrange Scores

A person's actual behavior depends on how demonstrating their personality characteristics is either facilitated or inhibited by specific situations. This is likely to be particularly true of 16pf sten scores in the midrange on the profile, those lying between stens 4 and 7, and especially those at stens 5 and 6. Interpretation of these scores can be one of the more challenging aspects of providing feedback. References to situational factors are used in the report narrative to remind the professional that interpretations of scores in the midrange may benefit from additional information gathered during a feedback session.

Structure of the Report

The 16pf Profile Report comprises the following sections:

Response Style Indices

This section provides information on how the respondent has answered the questionnaire. It allows the user to review and generate hypotheses about the respondent's test taking attitude.

Norm Group

The population against which respondents of the 16pf are compared. Using a norm group means a respondent's scores are considered in the context of the type of group they might belong to, rather than in isolation.

Profile Section

A graphical summary of the 16pf Global and Primary Factors, giving practitioners a concise overview of the respondent's personality profile.

Item Summary

This provides the respondent's specific item responses and summary statistics.

3

Response Style Indices

Summary: All of the response style indices are within the normal range: there is no indication that it is necessary to probe any of them further.

Impression Management	This individual has presented a self-image that is neither markedly self-critical nor overly positive.
	This individual has responded in a way that is not acquiescent.
	This individual has endorsed most items in a way that is similar to other people; it is unlikely that they have responded randomly.

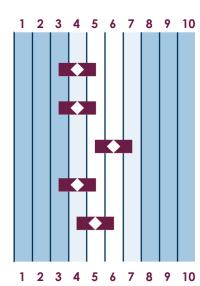

Norm Group

Global Factors

	Sten	
Extraversion	4	Introverted
Independence	4	Accommodating
Tough-Mindedness	6	Receptive
Self-Control	4	Unrestrained
Anxiety	5	Low Anxiety

Global Factor Definitions

Contributing Primary Factors

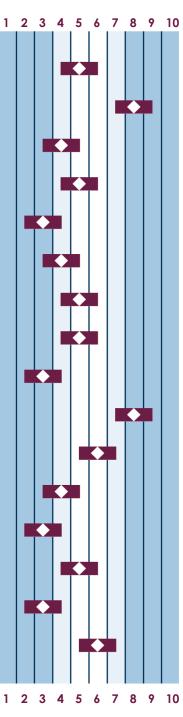

Extraversion Social orientation; the desire to be around others and be noticed by them; the energy invested in initiating and maintaining social relationships.	A F H N Q2	Warmth Liveliness Social Boldness Privateness (–) Self-Reliance (–)
Independence The role a person assumes when interacting with others; the extent to which they are likely to influence or be influenced by the views of other people.	E H L Q1	Dominance Social Boldness Vigilance Openness to Change
Tough-Mindedness The way a person processes information; the extent to which they will solve problems at an objective, cognitive level or by using subjective or personal considerations.	A I M Q1	Warmth (–) Sensitivity (–) Abstractedness (–) Openness to Change (–)
Self-Control Response to environmental controls on behavior; internal self-discipline.	F G M Q3	Liveliness (–) Rule-Consciousness Abstractedness (–) Perfectionism
Anxiety Emotional adjustment; the types of emotions experienced and the intensity of these.	C L O Q4	Emotional Stability (–) Vigilance Apprehension Tension

(-) Indicates a negative relationship between the Global and Primary Factor

Primary Factors

Warmth	A	5	Reserved
Reasoning	В	8	Concrete
Emotional Stability	С	4	Reactive
Dominance	Е	5	Deferential
Liveliness	F	3	Serious
Rule-Consciousness	G	4	Expedient
Social Boldness	Н	5	Shy
Sensitivity	Ι	5	Utilitarian
Vigilance	L	3	Trusting
Abstractedness	М	8	Grounded
Privateness	Ν	6	Forthright
Apprehension	0	4	Self-Assured
Openness to Change	Q1	3	Traditional
Self-Reliance	Q2	5	Group-Oriented
Perfectionism	Q3	3	Tolerates Disorder
Tension	Q4	6	Relaxed
